

3641/3645 IP Wireless Telephones

Overview

The Avaya 3641 and 3645 IP wireless telephones are designed for organizations that want the convenience of wireless communications and the benefits of leveraging IP-based converged communications solutions. These wireless telephones connect to your LAN, simplifying the management of your communications infrastructure. Wireless voice solutions enable users to be available to customers and co-workers thus improving productivity.

Capabilities

The Avaya 3641 and 3645 IP wireless telephones are designed to meet the business needs of both office and industrial environments. While working away from your desk, you can make and receive phone calls (including Caller ID), place calls on hold, establish conference calls, call back unanswered calls and check for messages, just to name a few. The navigation keys provide the user with easy and efficient access to additional capabilities such as phonebook access and redial list through the display.

Ideal in any work environment, the 3641 IP wireless telephone addresses the day-to-day rigors of the mobile user across many industries with back-lit keypad and large display. It is lightweight yet rugged in design making it a reliable option being resistant to dust, shock, and liquid damage. The convenience of the built-in speakerphone

and headset compatibility increase productivity and responsiveness for the user. The extended battery options increase accessibility by providing 24 hour operation.

The 3645 IP wireless telephone is designed for the industrial environment with its push-to-talk capability eliminating the need for two-way radios appropriate for work groups that are dispersed throughout an environment. The larger earpiece provides comfort for the user and seals out background noise. Like the 3641, the 3645 IP wireless telephone is equipped with a back-lit keypad and large display allowing for easy use. Built-in speakerphone, headset compatibility, and extended battery options boost efficiency and extend accessibility.
